

ASSIGNMENT QUESTIONS

Ques 1

```
int [] print Number
{
    n = 0
    while (n ≤ 10)
    {
        print n
        n = n + 1
    }
}
```

Ques 2 int [] print even number.

```
{
    for (i = 0 to 50)
    {
        if (i % 2 == 0)
        {
            print i
        }
    }
}
```

Ques 3 int number

```
{
    n = 1
    until (n > 15)
    {
        print n * number
        n = n + 1
    }
}
```

Ques 4

steps

- ① Read numbers from nums.txt
- ② store a number in $A[i]$
- ③ using for loop $i=0$ to $\text{length}(A)-1$
- ④

- ① Read the numbers from nums.txt.
- ② store all the numbers in an array $A[i]$
- ③ set the index $i=0$
- ④ check each element of the array using a for loop.
- ⑤ Multiply the current elements by 2
 $A[i] = A[i] \times 2$
- ⑥ Print the doubled value.
- ⑦ Increase the index and move to the next element
- ⑧ Repeat until all elements of the array are processed
- ⑨ Print $A[i]$

int n, int i read file & print int i [nums.txt]

{

for $i=0$ to $n-1$

$A[i] = A[i] \times 2$

{

print $A[i]$

}

}

Ques 5

```
int divide (int num1, int num2)
{
    local quotient
    local remainder
    if (num2 == 0)
    {
        print "Division by zero is not allowed"
    }
    else
    {
        quotient = num1 / num2
        remainder = num1 % num2

        print quotient upto 2 decimal place
        print remainder
    }
}
```

Ques 6

```
int maximum (a, b)
{
    if a > b
    {
        print a
    }
    else
    {
        print b
    }
}
```

Q7

```
int checkDirectory (Directory)
{
    if (directory does not exist)
    {
        create directory
        Print "Directory created"
    }
    else
    {
        print All files in directory
    }
}
```

Practice Question

Aug 18

Q1

```
function checkFile()
{
    filename
    if (file exist)
    {
        print "File Exist"
        elif (file is readable)
        {
            print "Readable"
        }
        elif (file is writable)
        {
            print "writable"
        }
    }
    else
        print "file does not exist"
}
```

Ques 2

function countfile

```
{  
    # filename.  
    words, lines, characters.  
    if { file exist }  
    {  
        words = Count word in file  
        lines = Count lines in files  
        characters = Count characters in files  
        {  
            print words  
            print lines  
            print characters  
        }  
    }  
    else  
    {  
        print "file does not exist"  
    }  
}
```

Ques 3

- ① list Contents of current directory
- ② sort files in descending order of size using ls -s
- ③ Take first file from the sorted list
- ④ store it as largest file
- ⑤ Print largest file

19 Aug

Ques

```
find word (string word, string filename)
{
    if (file exists)
    {
        search word in filename.
        print lines containing words
    }
    else
    {
        print "file does not exist"
    }
}
```

Ques 2

```
int multiplication table (int number)
{
    for (i = 1 to 20)
    {
        result = number * i
        print number " x " i " = " result
    }
}
```

Ques 3

```
check disk usage ()
{
    usage = get current disk usage
    print "Current disk usage: " usage
    if (usage > 80)
    {
        print "Warning: Disk usage is above 80%."
    }
}
```
